Abstract of Disclosure

A scanner includes a housing, a transparent platform, a scanning module, a motor, a front compensation element and a rear compensation element. The housing includes a front section, a rear section, and a scanning section. The transparent platform is installed on the housing for a document to be placed on. The scanning module is installed inside the housing for scanning the document. The motor is used to drive the scanning module. The front and rear compensation elements are installed inside the housing to assist the motor with starting and stopping the scanning module.
